DETAILED ACTION

Allowable Subject Matter

Claims 1-12 and 28-40 are allowed.

The following is an examiner's statement of reasons for allowance:

Chandrasekaran et al (hereafter Chandrasekaran), US Pat. No. 6970872 B1, discloses techniques for reducing latency in a multi-node system when obtaining a resource that does not reside in cache; and Vahalia et al (hereafter Vahalia), US Pat. No. 6973455 B1, discloses a file server system providing direct data sharing between clients with a server acting as an arbiter and coordinator. Both Chandrasekaran and Vahalia do not teach or fairly suggest the following features, which are recited in independent claims of the present patent application:

(a) a sender associated with at least one media data block, the sender including a block usage counter corresponding to the at least one media data block; wherein the sender does not swap out the at least one media data block when the corresponding block usage counter indicates that the at least one media data block is locked as recited claim 1.

(b) dividing, by a scheduler of the computing device, a plurality of media data blocks of a media data stream into three regions comprising a current region, an alternative send request region, and a look-ahead region as recited in claims 28 and 35.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
